PORTFOLIO PROJECT

Automated PO Booking

AI-powered purchase order processing and automated registration.

9 automated stages

PDF in, booked PO out

Santhoshkumar | IT

OVERVIEW

Replaces manual PO entry

9

automated stages from upload to saved booking

Reads the PDF

The user drops one PDF. One file can contain several purchase orders.

Checks the data

The agent extracts the details, checks the PO number and validates them.

Books the order

A work order number is generated and the booking is saved.

HOW IT WORKS

Nine stages, one upload

1 PDF uploaded
File accepted, PDF only, up to 10 MB

2 Reading document
The agent reads the PO content

3 Extracting details
Key PO fields are pulled out

4 Generating WO number
A new work order number is assigned

5 Checking PO number
PO number checked before booking

6 Validating information
Extracted data is validated

7 Finding customer
Customer matched to the record

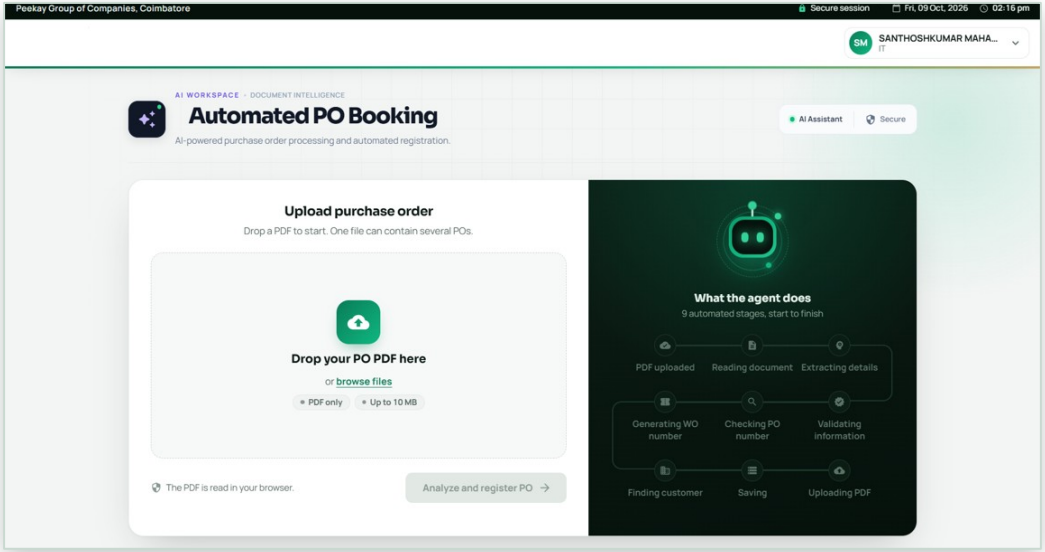

8 Saving
Booking saved to the database

9 Uploading PDF
Source PDF stored with the booking

STEP 1

Upload the PO

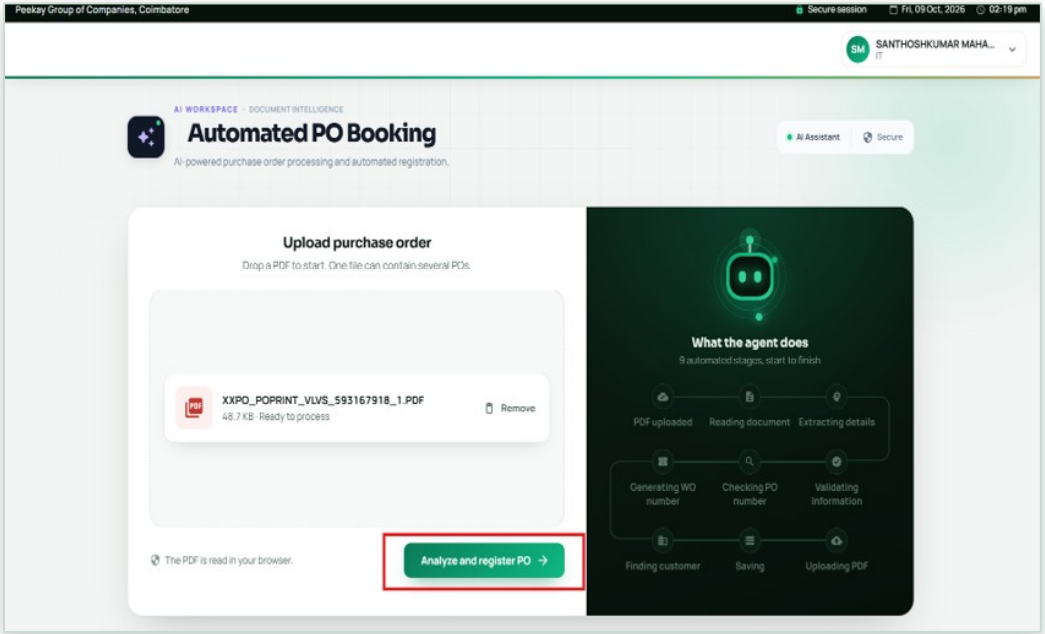

- Drop the PDF or browse for it
- PDF only, up to 10 MB
- One file can contain several POs
- The PDF is read in the browser

STEP 2

Ready to process

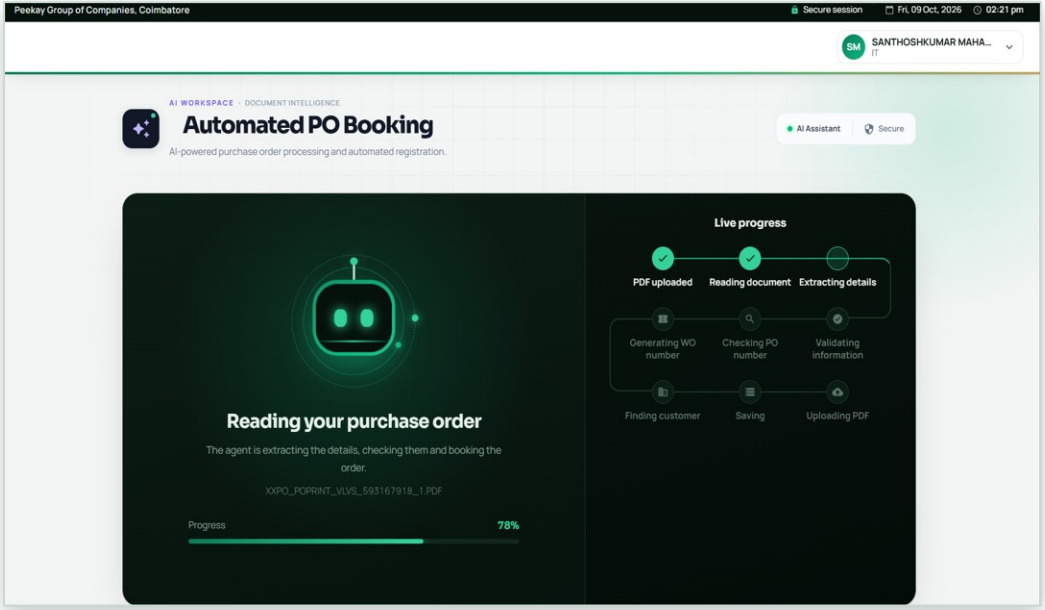

- File name and size are confirmed
- Remove the file if it is the wrong one
- One action starts the run: Analyze and register PO

STEP 3

Live progress

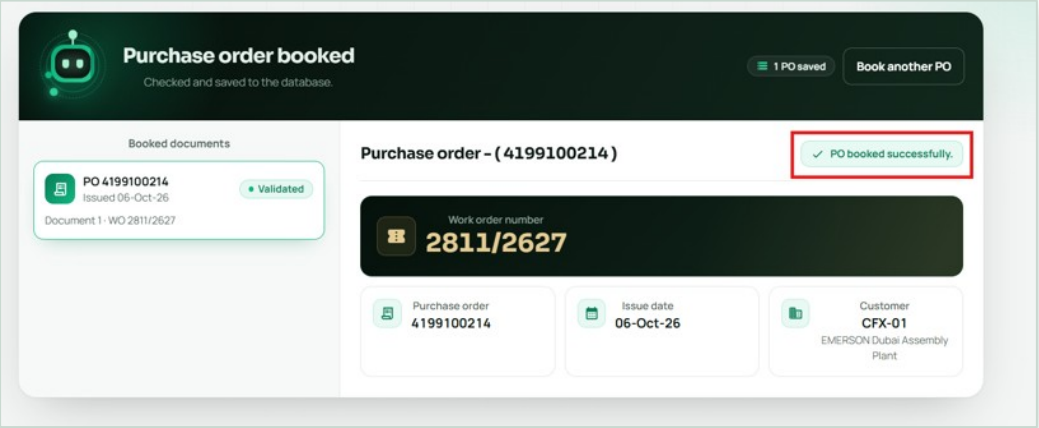

- Progress bar shows the percentage
- Stage tracker ticks off each step as it finishes
- Current file name stays visible

STEP 4

Booked and numbered

- Confirmation: PO booked successfully
- Each PO is listed and marked Validated
- Work order number shown prominently
- Customer matched, then Book another PO

SUMMARY

From PDF to saved booking in one run

Faster entry

One upload replaces typing PO details by hand.

Checked data

PO number and information are validated before saving.

Ready to use

A work order number is generated and stored with the PDF.
