MACHINE SHOP DIGITALIZATION

Machine Cell Operations Center

Scan-in job tracking and a live dashboard for CNC and machining cells.

17 machines

Live status, one screen

Santhoshkumar | IT

OPERATOR FLOW

From login to live job tracking

1

Scan In

Operator enters their Podium ID and the assigned machine is detected.

2

Select Process

The QR scanner opens, the operator selects the process and starts the job.

3

Live Timer

Job details show and a running timer tracks the job.

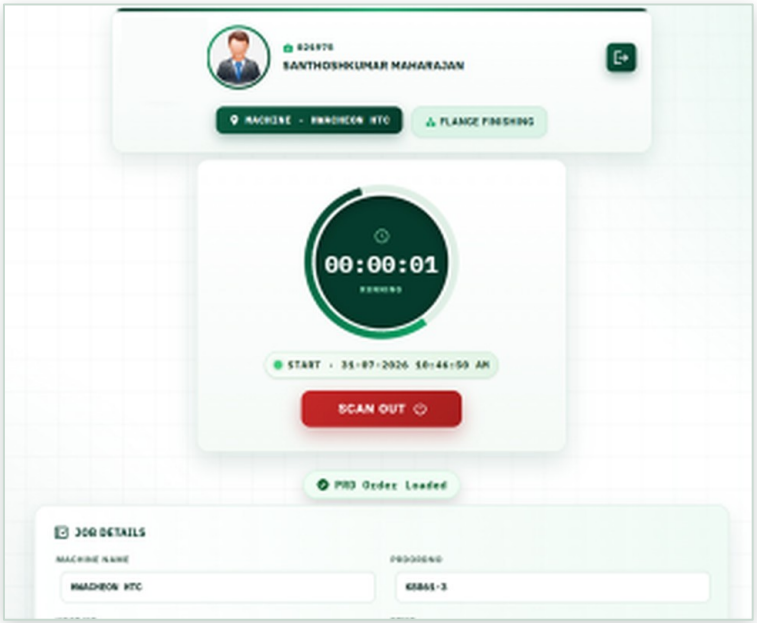

4

Scan Out

One tap logs the end time and frees the station for the next job.

JOB SCREEN

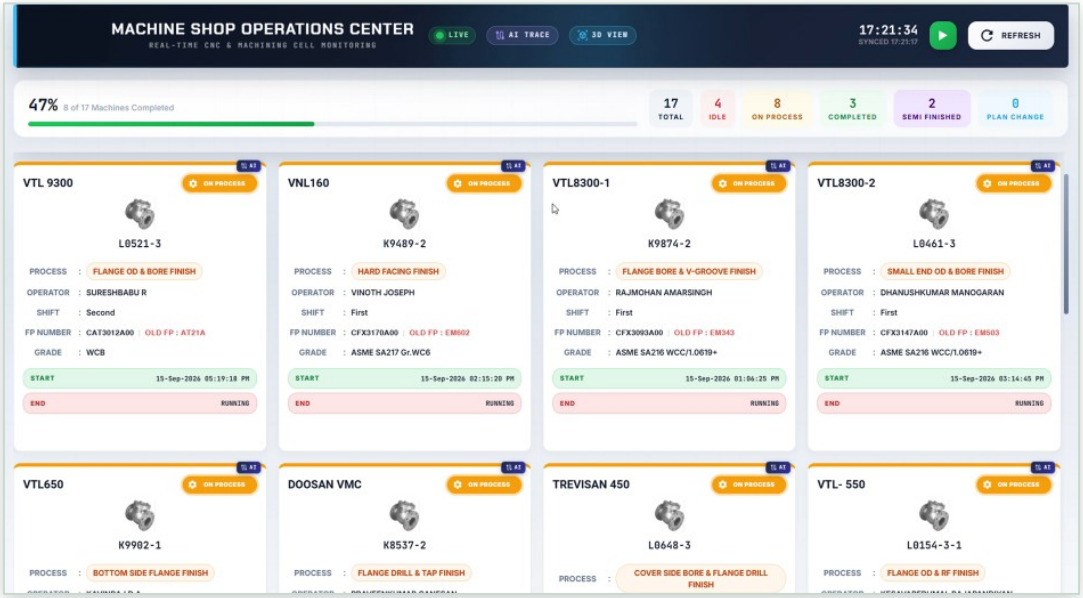

Every job carries full context

- Machine, production order, heat number, grade and FP number fill in the moment the QR is scanned. No manual entry.
- Start time and a live timer give supervisors an accurate record of cycle time.
- One Scan Out completes the loop and the system is ready for the next casting.

SUPERVISOR VIEW

Machine Cell Operations Center

Live machine status

All 17 machines show a live, colour-coded status.

Operator accountability

Operator, shift and job tied to each running machine.

Instant escalation

Idle capacity is spotted immediately, not at shift end.

SUMMARY

Scan in, track live, scan out

Scan in and out

One scan starts the job and one ends it.

Live dashboard

Every machine and its status on one screen.

Full job context

Order, heat, grade and FP number fill in automatically.
